Protect your mobile
phone inventory.

Track and monitor your cellular assets

Address the problem

Telecom store robberies have become an increasingly common occurrence. Criminals know retail outlets carry tens of thousands of dollars worth of products that are easy to resell at premium prices. The lucrative nature of such a hit has spawned an outbreak across North America. It's time to take action.

Disguise, track, seize

Ensurity Mobile is an advanced GPS tracking device hidden in plain sight. It's placed inside conventional mobile phone packaging, which blends in seamlessly with the cellular inventory in your store. The device has a sleep mode that is only triggered to wake up when there is motion that removes it from your preset boundaries. Tracking information is sent directly to our GPS server and the Ensurity monitoring centre that dispatches police to the live location of the device. You are also alerted and can monitor the position of your product while the recovery takes place.

24/7 monitoring

The Ensurity Mobile monitoring service is CSAA 5 Diamond rated. It runs around the clock - no breaks, no downtime. When the motion trigger is activated on your device, our monitoring centre instantly tracks the precise location of the device in real time and dispatches authorities to recover your products quickly.

A seamless solution for optimized store security

No installation, no setup, no battery charging, no maintenance

The Ensurity Mobile device works impeccably on its own. There are no nuisance installations, setups or maintenance requirements. The device automatically remains in "sleep mode" and lasts this way for 4 years. Simply place the device where you want it and leave the security to us.

Affordable - protection that's worth every penny

We make it easy for you to gain back the security of your telecom stores. A long-lasting device with no hassles and an iron-clad monitoring service, Ensurity Mobile gives you the peace of mind you've been missing at a competitive price.

Use it however you like

Set up one or several around your store and in your back room to appear as though they're just another piece of inventory. The monitoring centre is only alerted when a device leaves your predefined GEO fence, so feel free to move your devices as need be. Enjoy the flexibility of placing and using the device anywhere in your outlet without worrying about accompanying accessories, false alarms or battery drainage.
